

ISO 50001 certification

Improve your energy performance and reduce your energy consumption

Every company, whether a private business, public enterprise, SME or major corporation, is exposed to fluctuating energy prices and the risks associated with climate change, which represents a significant challenge in the industrial sector where energy bills can account for 20% of an organization's expenditure.

By adopting the good practices and methodological approach described in international standard ISO 50001, you can improve your energy management performance. With AFAQ ISO 50001 certification, you can quickly lower your costs while sending out a clear signal about your commitment to using energy responsibly...

A PRE-AUDIT SURVEY PRIOR TO CERTIFICATION

Are you looking to confirm the opportunity of setting up an energy management system (EnMS) or have you already implemented an energy management system and wish to assess your performance against the requirements of ISO 50001?

The pre-audit survey comprises a field audit conducted by a qualified auditor. You will receive an assessment report detailing the opportunities for improvement, a score relating to your progress level against the requirements of ISO 50001, and the percentage of conformity to the standard. The report serves as a real roadmap for implementing ISO 50001.

ISO 50001 CERTIFICATION

ISO 50001 is the first international standard based on an accounting approach to energy and delivers true methodological and management support for achieving your energy performance objectives.

With AFAQ ISO 50001 certification, you assess your energy consumption, implement an energy metering plan, improve your operational practices and make innovative investment choices.

BENEFITS OF ISO 50001 CERTIFICATION

- Obtain long-term cost reductions
- Improve your capacity to invest
- Raise your energy performance
- Obtain long-term cost reductions
- Become a pioneer in energy management system strategies

CHOOSE THE AFNOR GROUP

The AFNOR Group is a leader and benchmark in management system certification services and a pioneer in ISO 50001 certification.

Our auditors are trained on the ISO 50001 standard and the different regulatory environments. They are chosen for their experience in energy efficiency and environmental issues. Our network of experts covers every sector of activity.

Choose the AFNOR Group and you can combine an ISO 50001 audit with other management system audits, such as quality, environment and safety.

A CERTIFICATE COMPATIBLE WITH AFAQ CERTIFICATIONS

Featuring the same structure and focusing on continual improvement, the ISO 9001 (quality), ISO 14001 (environment) and OHSAS 18001/ILO-OSH 2001 (safety) standards are complementary with ISO 50001. ISO 50001 certification can therefore be obtained following or in combination with a **quality, environmental or safety audit**.
